

Name: _____

Date: _____

parasitism	parasitism	light	commensalism	commensalism
mutualism	termites		symbiosis	mutalism

Most animals can not get close to a shark. The remora fish lives very close to sharks. It eats bad bacteria on sharks. This close relationship is called _____.

There are three types of symbiosis. They are _____, _____, and _____.

With _____, one organism gets something, while, the other is harmed. An example is a tapeworm living inside a person.

With _____, both organisms get something. Protozoa live inside _____. Termites chew wood. Protozoa break food down so both organisms can use it.

Lastly, with _____, one organism gets something, but the other gets nothing. It also is not harmed. An example is an orchid plant living in a tree. The orchid gets protection, _____, and water. The tree gets nothing.
